

Restaurant Charbroiler Technology Partnership

Substantial Funding Available for Valley Restaurants!

Reducing air pollutant emissions from under-fired charbroilers is an important component of the San Joaquin Valley Air Pollution Control District's strategy for meeting federally mandated, health-based air quality standards for particulate matter. As a result, the District will be expanding its commercial charbroiling rule, through a public rule development process, to require use of technologies that reduce air pollutant emissions from under-fired charbroilers.

To further demonstrate the successful use of control equipment in the Valley, and to ease the financial burden for Valley businesses that wish to install control equipment before it is required by District Rule 4692 (Commercial Charbroiling), the District is currently offering substantial incentive funding. Participating restaurants will be provided funding for the full cost of purchasing, installing, and maintaining installed systems during a demonstration period covering two years of operation. Participating restaurants will be allowed to keep the equipment after the demonstration period has concluded.

To Participate

For more information, please fill out an interest card. For any questions on the program, please contact the District's Technology Advancement Program staff at **(559) 230-5800**, or email **technology@valleyair.org**.

SAN JOAQUIN VALLEY UNIFIED AIR POLLUTION CONTROL DISTRICT
RESTAURANT CHARBROILER TECHNOLOGY PARTNERSHIP (RCTP)
Restaurant Interest Card

Funding is available!

Funding is now available for Valley restaurants to install technology to reduce pollution. Participating restaurants will be provided funding for the full costs of purchasing and installing pollution control units, and may receive funding for ongoing maintenance of the control technology for up to two years.

If you are interested in participating in the Restaurant Charbroiler Technology Program (RCTP), please complete this interest card and return to the District via email, or contact District Technology Advancement Program staff for questions or assistance at:
