I. EXECUTIVE SUMMARY

This “2022 Annual Report on the District’s Indirect Source Review Program” covers the reporting period from July 1, 2021, through June 30, 2022.

The District’s [Indirect Source Review \(ISR\) rule](#), was originally adopted in 2005 to reduce the growth in both nitrogen oxides (NOx) and particulate matter smaller than ten microns in aerodynamic diameter (PM₁₀) emissions from mobile and area sources associated with construction and operation of new industrial, commercial, residential, transit and other non-residential development projects in the Valley. New development projects create air pollution during construction and operation by prompting more vehicle trips and other pollution-causing activities. To address the rule requirements and achieve emissions reductions at the project site and within local communities, developers incorporate clean air measures into their project designs to reduce emissions impacts at project locations. Some examples include: use of clean, newer model-year off-road construction equipment, zero emission and or near-zero emission heavy duty on-road truck and van fleets, zero emission on-site equipment, installation of electric vehicle charging infrastructure, solar power, installation of bike paths and sidewalks, and high-efficiency buildings.

If on-site clean air measures implemented by a developer do not achieve the emission reductions mandated by the ISR rule, the developer must pay an off-site mitigation fee for balance of the emission reductions required for the project. One hundred percent of off-site mitigation fees are used by the District to fund emission reduction projects through its incentive grant programs. Additionally, developers pay an administrative fee equal to four percent (4%) of the required off-site fees. This administrative fee is to cover the District’s cost of administering the off-site emission reduction projects through the District’s grants and incentives programs.

In addition to reducing the development project’s impact on air quality through compliance with the District’s Indirect Source Review rule, a developer can further reduce the project’s impact on air quality by entering into a “Voluntary Emission Reduction Agreement” (VERA) with the District to address the mitigation requirements under the California Environmental Quality Act (CEQA) or National Environmental Policy Act (NEPA). Under a VERA, the developer may fully mitigate project emission impacts by providing funds to the District, which are then used by the District to administer emission reduction projects. The District has entered into 50 VERAs since 2005.

This annual report includes revenues, expenditures, and emission reductions achieved for both ISR and VERA (ISR-VERA program). To date, in addition to avoiding approximately over 19,000 tons of NOx and PM₁₀ emissions from new development through the incorporation of on-site mitigation and clean-air design measures into

projects subject to the Indirect Source Review rule, the District has achieved over 17,000 tons of reductions in NO_x and PM₁₀ emissions through the investment of over \$140 million dollars in ISR and VERA funds through its emission reduction grants and incentives programs.

During this reporting period, the District received 355 ISR Air Impact Assessment applications. The District also approved three VERAs during this reporting period.

The total amount of funds received for this reporting period under the ISR rule and VERA program were \$6,028,377 and \$7,307,935, respectively, for a total of \$13,336,312. The District achieved emission reductions via grants and incentives clean-air projects totaling 1,326 tons NO_x and 185 tons PM₁₀, for a combined total of 1,511 tons, at a cost effectiveness of \$9,694 per ton of emissions reduced.

II. INTRODUCTION

The San Joaquin Valley's challenges in meeting national ambient air quality standards are unmatched anywhere in the nation due to the region's unique geography, meteorology and topography. Since 1992, the District has adopted over 650 rules to implement an aggressive on-going control strategy to reduce emissions in the Valley in order to reach attainment of the federal mandates, resulting in air quality benefits throughout the Valley. Through these ongoing efforts by the District, and significant efforts by CARB to reduce emissions from mobile sources, NO_x emissions across the Valley have been reduced by over 75%, while stationary source emissions, which are under the District's jurisdiction, have been reduced by over 93% since 1980.

Although significant progress has been made, the San Joaquin Valley is one of the fastest growing regions in the state. The Demographic Research Unit of the Department of Finance released interim revised population growth projections in July 2021 of approximately 14.2% in the Valley's population during the 2015 to 2030 period. In contrast, the total population for the State of California is projected to increase by only 7.3% over the same time period.

Population growth results in increased area source emissions from activities such as consumer product use, fuel combustion for heating and cooking, and landscape

maintenance. The total number of vehicle miles traveled (VMT) also increases with population growth, resulting in more emissions due to the combustion of vehicle fuels. The projected growth in these so called "indirect source" emissions erodes some of the progress generated by emission reductions achieved through the District's stationary source air quality management program and state and federal mobile source controls.

Although the District cannot directly regulate mobile source tailpipe emissions, it does have longstanding statutory authority to regulate indirect sources of air pollution. Pursuant to this authority, the District made a federally enforceable commitment to regulate indirect sources when it adopted its PM₁₀ Attainment Plan in June 2003. Subsequently, the California State Legislature passed Senate Bill 709, Florez, in the fall of 2003, which Governor Gray Davis subsequently signed and codified into the Health and Safety Code in §40604. This additional legislation required the District to adopt, by regulation, a schedule of fees to be assessed on area wide or indirect sources of emissions that are regulated by the District.

The purpose of the District's Indirect Source Review rule is to require developers to incorporate clean air measures and reduce emissions of NO_x and PM₁₀ from new development projects. It is important to note, particulate matter emissions from mobile sources are overwhelmingly PM_{2.5}, a subset of PM₁₀. Therefore, the PM₁₀ emission reductions achieved under ISR result directly in PM_{2.5} emission reductions. In other words, PM₁₀ emissions increases are being offset by emissions reductions that are overwhelmingly PM_{2.5}, a positive impact on PM_{2.5} concentrations.

The Indirect Source Review rule applies to any applicant that seeks to gain final discretionary approval for a development project, or any portions thereof, which upon full build-out will include any one of the following:

- 50 residential units
- 2,000 square feet of commercial space
- 9,000 square feet of educational space
- 10,000 square feet of government space
- 20,000 square feet of medical or recreational space
- 25,000 square feet of light industrial space
- 39,000 square feet of general office space
- 100,000 square feet of heavy industrial space

- 9,000 square feet of any land use not identified above

Additionally, the Indirect Source Review rule applies to any applicant that seeks to gain approval from a public agency for a large development project, which upon full build out will include any of the following:

- 250 residential units
- 10,000 square feet of commercial space
- 45,000 square feet of educational space
- 50,000 square feet of governmental space
- 100,000 square feet of medical space
- 100,000 square feet of recreational space
- 125,000 square feet of light industrial space
- 195,000 square feet of general office space
- 500,000 square feet of heavy industrial space
- 45,000 of square feet of space not identified above

In addition to the above, a transit or transportation development project is subject to the Indirect Source Review rule if construction exhaust emissions equal or exceed two (2.0) tons of NO_x or two (2.0) tons of PM₁₀.

This report was prepared pursuant to provisions of Rule 9510 that require the District to prepare an annual report regarding expenditure of received funds and achieved emission reductions. Pursuant to Section 10.4 of the District's Indirect Source Review rule, the annual report includes the following:

- Total amount of off-site fees received;
- Total monies spent;
- Total monies remaining;
- Any refunds distributed;
- A list of all projects funded;
- Total emissions reductions realized; and
- The overall cost-effectiveness factor for the projects funded.

III. IMPLEMENTATION

District Indirect Source Review Rule

During this reporting period, the District received 355 ISR applications. For historic context, the number of ISR applications received each year is presented in Figure 1 below.

Figure 1: Number of ISR Applications Received

Voluntary Emission Reduction Agreements

A Voluntary Emission Reduction Agreement is an air quality mitigation measure by which a developer can voluntarily enter into a contractual agreement with the District to mitigate a development project's impact on air quality, going beyond reductions achieved by compliance with the District's ISR rule. Under the agreement, the developer provides funds to the District to administer the implementation of the VERA. The District then identifies emissions reductions projects, funds those projects, and verifies that the specified emission reductions have been successfully achieved.

The types of emission reduction projects that have been funded in the past include electrification of stationary internal combustion engines (such as agricultural irrigation pumps), replacing old heavy-duty trucks with new, cleaner, more efficient heavy-duty trucks, and replacement of old farm tractors with cleaner tractors. Since 2005, the District has entered into 50 VERAs. It is the District's experience that implementation of a VERA is often a feasible mitigation measure under CEQA, effectively achieving emission reductions necessary to reduce impacts to a less than significant level.

For development projects subject to the ISR rule, the developer must also comply with applicable rule provisions. Emission reductions achieved through implementation of a VERA are credited towards satisfying ISR requirements. This report therefore includes revenues and emission reductions achieved through both the ISR and the VERA

process.

During this reporting period, the District adopted the following VERAs, with their estimated dollar amounts and emissions reductions shown below:

- Fifth Standard Solar Complex: \$550,974 and 59.9 tons of emissions reductions
- Scarlet Solar Energy Project: \$5,574,430 and 615.1 tons of emissions reductions
- Austin Quarry Project: \$627,385 and 67.1 tons of emissions reductions

Oil and Gas Emission Reduction Agreement

In 2015, Kern County adopted an EIR for amendments to the Kern County Zoning Ordinance to address oil and gas exploration and operation activities in the identified area within Kern County. Consistent with the final EIR, Kern County and the District adopted an oil and gas emission reduction agreement (OGERA) to mitigate emissions associated with future oil and gas exploration and production in the San Joaquin Valley. Under this process, Kern County collects a mitigation fee from oil and gas companies when issuing permits for the drilling of new oil or gas production wells, and transfers the funds to the District to mitigate air quality impacts through its grants and incentives programs.

A Petition for Writ of Mandate filed in the Kern County Superior Court challenged Kern County's 2015 Ordinance. The County subsequently amended the Ordinance and accompanying EIR in 2021, which was also challenged by Petitioners. On June 7, 2022, the court issued a ruling that the 2021 amended Ordinance was defective in several respects. The District is currently working with Kern County to address the impacts of the ruling as it relates to implementation of the OGERA.

IV. FISCAL SUMMARY

As presented in Figure 2 below, the total amount of funds received for this reporting period under ISR and VERA were \$6,028,377 and \$7,307,935 respectively, for a total of \$13,336,312. The figure also illustrates the historic amounts of funds received.

Figure 2: ISR and VERA Program Funds Received

As presented in Table 1 below, the District's ISR and VERA accounts held a beginning balance of \$36,275,088. During this reporting period, the District received \$13,336,312, spent (paid out) off-site emission reduction projects totaling \$14,647,514, encumbered \$17,519,650 in contracts for emission reduction projects, leaving an unencumbered balance of \$17,444,236.

V. EMISSION REDUCTION SUMMARY

Through the District's grants and incentives programs, clean-air emissions reduction projects go through a thorough application review before the contract for these projects between the District and the project applicant is executed. Once executed, funds are then encumbered for that project. The contract is valid for a limited time to allow for the purchase of the new equipment and to submit a reimbursement request. Once the reimbursement request is approved, the funds encumbered for the emission reduction project are spent (reimbursed to the project applicant). This process typically takes several months for completion. Therefore, depending on the types of emission reduction projects available for funding, the funds received during this reporting period may result in the funds being spent the in same reporting period or in future reporting periods.

ISR and VERA Off-Site Emission Reductions Achieved - Previous Reporting Period

Emission reduction projects achieved total reductions of 1,326 tons NO_x and 185 tons PM₁₀, for a combined total of 1,511 tons at a cost-effectiveness of \$9,694 per ton (Table 2 below). During this reporting period, the District spent ISR and VERA monies to fund 1,561 clean-air emission reduction projects. These clean-air projects included the replacement of older, higher-emitting agricultural tractors with new latest-tier tractors, replacement of older, higher-emitting agricultural irrigation water pump engines with electric motors, retrofit of residential open-hearth fireplaces with certified natural gas burning inserts, and a dairy feed mixer electrification project. A complete list of all clean-air projects funded is presented in Appendix A.

Achieved emission reductions and resulting cost effectiveness presented in the table below are based on approved program guidelines and methodologies, and represent only emission reductions from projects that have been paid out during this reporting period.

ISR and VERA Off-Site Emission Reductions Achieved - Historic Since 2006

As discussed above, mitigation funds under ISR and VERA are administered through the District's grants and incentive programs to fund clean-air projects in the Valley. The District has built a reputation for excellence in the implementation of these programs, as highlighted in multiple audits by state agencies that commended the District's incentive programs for their efficiency and effectiveness. Since inception of the District's ISR rule and VERA program, the District's programs have achieved the emissions reductions shown in Table 3 below.

Table 3: Off-Site Emission Reductions Achieved Since 2006

Program	NOx (tons)	PM₁₀ (tons)	Total (tons)
ISR	5,395	1,514	6,909
VERA	9,550	945	10,495
Total	14,945	2,459	17,403

ISR Program Estimated Emission Reductions - Previous Reporting Period

Estimated emission reductions are a combination of emission reductions to be achieved through implementation of project design elements at full project build out and through funding off-site emission reductions projects through District grants and incentive programs using off-site emission reduction mitigation fees.

For this reporting period, projects assessed under ISR resulted in estimated combined on-site and off-site emission reductions as shown in Table 4 below.

Table 4: Estimated Emission Reductions from Approved ISR Projects During the Previous Reporting Period (July 1, 2021 - June 30, 2022)

Source	NOx (tons)	PM₁₀ (tons)	Total (tons)
On-site Emission Reductions	825	2,244	3,069
Off-site Emission Reductions	1,337	937	2,274
Total	2,162	3,181	5,343

ISR Program Estimated Emission Reductions - Historic Since 2006

Since implementation of the District's ISR rule began in 2006, the amount of emissions reductions estimated under approved ISR projects as shown in Table 5 below.
